Frontend Engineer with 5+ years of experience developing scalable and high-performance web applications using React.js, TypeScript, and modern JavaScript technologies. Experienced in building enterprise-grade single-page applications (SPAs), geospatial visualization systems, secure authentication workflows, and reusable component architectures. Skilled in React Hooks, TanStack Query, REST API integration, performance optimization, and responsive UI development. Proven ability to deliver production-ready applications in Agile environments while collaborating with cross-functional teams.

SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, React Router, Redux, Context API

Backend & APIs: Node.js, Express.js, RESTful APIs, Axios, JWT Authentication, API Integration

State Management & Performance : TanStack Query (React Query), React Hooks, Server State Management, Memoization, Lazy Loading, Code Splitting, Component Optimization

Geospatial & Visualization : Mapbox GL, GeoServer, CQL Filters, Interactive Dashboards, Data Visualization

Tools & Platforms: Git, GitHub, npm, Vite, Postman, Jira, Confluence

Development Practices : Responsive Web Design, Component-Based Architecture, Cross-Browser Compatibility, Agile/Scrum, Clean Code Principles

EXPERIENCE

Tata Consultancy Services, Bengaluru

System Engineer

April 2021 - Present

- Developed enterprise-scale React.js applications for network and operations management systems with real-time visualization of devices and ticketing data.
- Built an AI-powered global search platform that enabled conversational queries and summarized operational insights for networking systems.
- Implemented secure authentication and authorization workflows using JWT and protected routing mechanisms to ensure secure application access.
- Managed asynchronous server state using TanStack Query, including caching, background synchronization, retry handling, and optimized API data fetching.
- Integrated multiple backend RESTful APIs using Axios with centralized interceptor-based error handling and reusable API service architecture
- Designed and developed interactive geospatial dashboards using Mapbox GL and GeoServer with dynamic CQL filtering, route tracing, and real-time marker visualization.
- Engineered reusable and modular UI components using React Hooks, Context API, and TypeScript to improve scalability and maintainability.
- Improved frontend rendering performance using memoization techniques, optimized state management, and reduced unnecessary component re-renders.
- Developed responsive and accessible user interfaces using Tailwind CSS, Flexbox, and CSS Grid for cross-device compatibility.
- Collaborated with cross-functional Agile teams in sprint planning, feature development, code reviews, and production deployments.

EDUCATION

CV Raman Global University, Bhubaneswar

B.Tech In Computer Science & Engineering

CGPA 7.41

CERTIFICATES

- AWS Certified Developer - Associate
- Cambridge English Entry Level Certificate
